

Weighted Rollers

TA-100

The TA-100 hand roller is designed to meet the requirements of ASTM and PSTC test methods and provides a consistent pressure when adhering adhesive test specimens to a test plate or substrate for peel adhesion testing. The design limits operator influence on the pressure exerted and also allows the roller to be removed easily for calibration certification and replacement.

- Part #275-0100
PSTC/ASTM Hand Roller - 4.5 lbs (2.04 kg)
- Roller featuring a steel core
- Shore scale A 80 durometer silicone rubber.
- 3.75" diameter and 1.75" width
- Optional certificate of calibration available upon request

Meet Industry Standards:

ASTM D3330 / ASTM D3330M

ASTM D6252

PSTC Appendix B

Custom size and weight rollers are available upon request. Please specify the required weight, diameter and width. All rollers are supplied with a Shore scale A 80 durometer rubber covering unless otherwise specified.
